

**Fund Characteristics**

The USD CONVERGENCE Bond follows on the successful performance of Euram’s Euro denominated Euroopportunity Bond with a similar philosophy that focuses on a USD basis.

As a so called Convergence-Bond-Fund, it invests in bonds of EU accession countries or those aspiring to accession and Eastern European and CIS bonds, predominantly in bonds denominated in USD or – given excellent macroeconomic fundamentals – directly in the local currency. Characteristically, the fund takes advantage of yield enhancements of various Government and Corporate borrowers against Treasuries and German or Austrian government bonds. We take utmost care regarding the quality of the debtor with respect to his yield enhancement.

The most important principle is to evaluate the debtor quality first (in general only a limited part of investments below Investment-Grade and then only when perspectives have shown dramatic improvements in the near past and/or a rating-upgrade is expected) to achieve a long-term outperformance against the EFFAS-USD-Govt Index.

**Fund Manager’s Comment**

Corporate Bonds got hit by the Corona pandemic which resulted in higher risk premiums. As a consequence central banks worldwide started to buy corporate bonds lowering risk premiums again. The very low and negative yields for government bonds are reflecting the current liquidity supply policies by the central banks worldwide.

Supported by central banks and the continuing very low yields we expect business activity to rise again. Given the companies’ mostly comfortable liquidity situation we don’t expect more bond issues, thus resulting in a favorable price development.

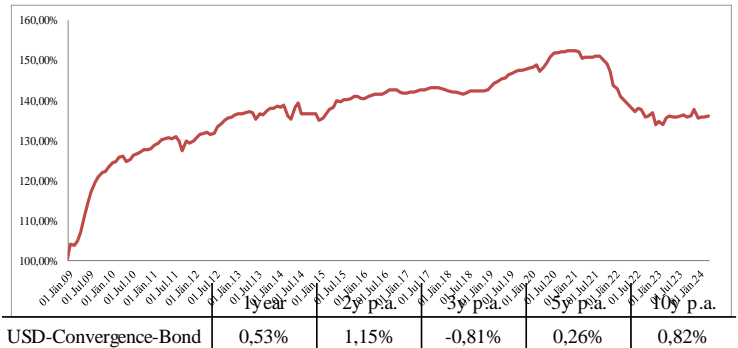

The yield on the 10 Year Bond is at a level of 4,201%.
